(54) Title: METHOD FOR DETERMINING THE IMPACT OF A MULTICOMPONENT SYNTHETIC PRODUCT MIXTURE ON THE BIOLOGICAL PROFILE OF A DISEASE WITHIN A GROUP OF LIVING SYSTEMS AND THE DEVELOPMENT OF NEW COMBINATORIAL INTERVENTIONS

(57) Abstract: The invention provides a method for determining the impact of a chemical multicomponent mixture on the biological profile of a disease comprising the steps of: (a) determining a biological profile of the disease by comparing the biological profile of a group of living systems with symptoms of the disease with the biological profile of a reference (or healthy) group of living systems, using a multivariate analysis; (b) determining the impact of a series of samples of one or more synthetic compositions on the biological profile of the disease, in which samples the concentrations of the one or more synthetic compositions differ, using a multivariate analysis; (c) preparing a set of multicomponent synthetic product mixtures which are expected to display a desired impact on the biological profile of the disease on the basis of the information obtained in step (b); and (d) determining the impact of the set of multicomponent mixtures as prepared in step (c) on the biological profile of the disease using multivariate analysis. The invention also provides a method for preparing a medicament, and the use of a multicomponent synthetic product mixture as prepared in step (c) for preparing a synthetic product-based medicament.
